The Italian National Institute of Health - 1

- The Istituto Superiore di Sanità is the leading technical and scientific body of the Italian National Health Service
- Its activities include research, clinical trials, control and training in public health
- It also serves as a major national clearing-house for technical and scientific information on public health issues

The Italian National Institute of Health - 2

- The Institute is involved in collaboration and consultation with other institutions responsible for public health, including the Ministry of Health, regional health authorities, local health agencies and hospitals
- It cooperates with those responsible for the design and implementation of health and scientific programmes at local and national level and also plays a leading role in several major international research projects

Departments

- Cell Biology and Neurosciences
- Environment and Primary Prevention
- Haematology, Oncology and Molecular Medicine
- Infectious, Parasitic and Immune-Mediated Diseases
- Technology and Health
- Therapeutic Research and Medicines Evaluation
- Veterinary Public Health and Food Safety

National Centres

- National Aids Center
- National Centre for Chemical Substances
- National Centre for Epidemiology, Surveillance and Health Promotion
- Centre for Immunobiologicals Research and Evaluation
- National Centre for Rare Diseases
- Evaluation and Accreditation Body
- National Blood Centre
- National Transplant Centre

Documentation, Information and Publications

- The Institute serves as a major source of information relating to public health and biomedicine in Italy through online connections to national and international scientific databases and data banks
- It also serves as the national reference centre for MEDLARS (MEDical Literature Analysis and Retrieval System), a comprehensive international data bank coordinated by the US National Library of Medicine (NLM)
- The ISS library supports the Institute's activities and specializes in scientific documentation in the biomedical field
- The Institute produces numerous publications, including a quarterly peer-reviewed journal (Annali), a monthly newsletter describing major research activities and services (Notiziario), and different series of technical reports

Technical Service

Data Management, Documentation, Library and Publishing Activities

To support institutional activities through:

- collection, processing and automation of health and technical-scientific data
- management of database consultation systems
- provision of library and information services
- editing, printing, and dissemination of the Institute's publications

Sectors

Data management

Documentation service

Documentation Service

- The mission of the Documentation Service is online retrieval of scientific and biomedical information in databases, websites and other electronic resources.
- <http://www.iss.it/sdoc>

About us <p>The mission of the Documentation Service is online retrieval of scientific and biomedical information in databases, websites and other electronic resources.</p>	Online searching <p>Technical-scientific information available online on a fee-basis or free-of charge, can be searched for internal or external users.</p> <p>External users</p> <p>Internal users</p>	MEDLARS Center <p>Since 1979 the Documentation Service is the National Reference Center for MEDLARS (Medical Literature Analysis and Retrieval System) of the National Library of Medicine (NLM) of Bethesda (USA), a set of biomedical databases, including PubMed.</p>
Data Banks <p>MeSH - Italian translation</p> <p>PIRAMIDE - Biomedical journals indexed with MeSH, linked to Italian Libraries holdings</p> <p>SIBIL - Online information system on bioethics</p>	Document Delivery <p>A document delivery service for articles not available in Italy is offered through international providers (NLM DOCLINE and the British Library).</p> <p>External users</p> <p>Internal users</p>	Electronic Resources <p>NLM archives - Biomedical Information</p> <p>NLM archives - Topical information</p> <p>NLM archives - Health information for the general public</p> <p>Other archives</p>
SIBIL <div>  <div> SIBIL Online information system on bioethics <p>An integrated system based upon an ISS research project on bioethics. The project collects all Italian literature published since 1995.</p> </div> </div>		

Ethicsweb – www.ethicsweb.eu

- Funded under the 7th Framework Program (FP7) of the European Commission
- June 2008 – August 2011
- Including 15 partners
- Aimed at developing a centralized European portal on documentation in Ethics and Science
- Special emphasis is placed on the semantic approach

Ethicsweb Homepage

The screenshot shows the ETHICSWEB homepage. At the top left is the logo, which consists of a series of blue dots of varying sizes arranged in a semi-circle above the word "ethicsweb" in a blue, lowercase, sans-serif font. Below the logo is a vertical navigation menu on the left side of the page. This menu contains several sections: "Database search" with sub-links "About databases" and "Help"; "Find resources on..." with sub-links "Literature", "Laws, regulations, guidelines", "Training materials and programmes", "Research projects", "Experts", "Ethics centres", and "Events and news"; "EC ethics project portals"; "European research ethics"; "Documentation practice"; "Network of Ethics Documentation Centres"; and "Links to international organizations". The main content area on the right has a light blue background. At the top of this area is a "Home" link. Below it is a "Welcome to ETHICSWEB" section, followed by a paragraph describing the system as an "Inter-connected European information and documentation system for ethics and science: European Ethics Documentation Centre". This is followed by an "About ETHICSWEB" section, which contains a paragraph about the system's aim to stimulate democratic debate and provide easy access to information. Below this paragraph is another paragraph stating that ETHICSWEB strives for the documentation of various sources. At the bottom of the main content area is a bulleted list of these sources: literature; laws, regulations and guidelines; training materials and training programmes; academic exchange programmes; centres, projects and experts; and events and news (such as conferences, calls for papers and new initiatives).

Welcome to ETHICSWEB

Inter-connected European information and documentation system for ethics and science: European Ethics Documentation Centre

About ETHICSWEB

It is the overall aim of ETHICSWEB to stimulate an enhanced democratic debate on ethical issues of science and to promote a more engaged and informed public. Therefore, existing information and documentation systems will be connected to allow and ensure an easy access to comprehensive information on science and ethics. At the same time sophisticated tools, both technical and semantic, will be applied or – if necessary developed – to make the huge amount of information available for all parties involved. ETHICSWEB will be a common, decentralized European access point for information that is made available in different European member states, by various regional providers and centres as well as by international organizations.

ETHICSWEB strives for the documentation of different sources which include information on ethics and science like

- literature;
- laws, regulations and guidelines;
- training materials and training programmes;
- academic exchange programmes;
- centres, projects and experts;
- events and news (such as conferences, calls for papers and new initiatives).

Rare Diseases

- Participation in training courses addressed to patient associations
- Courses were held in different Italian regions
- Cascade training
- Quality evaluation of medical web resources
- How to search information concerning rare diseases

The Library

Specialised in scientific documentation in the biomedical field.

Includes publications by national and international institutions and organizations, pharmacopeias, official publications, health legislation, textbooks, technical reports, grey literature...

WHO Documentation Centre

www.iss.it/whod

The ISS has been the
World Health Organization Documentation Centre
(*WHO DC*) since 1991

It supports WHO activity by promoting the distribution
in Italy of documents produced
by the *WHO Headquarters* in Geneva and
by the *WHO Regional Office for Europe* in Copenhagen
(*WHO/EURO*)
